

## **Data in the Wild Assignment**

Find a data visualization either in a news article, an online report, etc.

1. Include the visualization (make sure it is sourced).
2. What works in the visualization? What do you like about it?
3. What doesn't work about it or what isn't ideal? How would you improve it?
4. There are multiple ways to visualize data. What other graph types might work for your example?

Be thoughtful and strategic!
